

STORAGE BOX

ABSTRACT OF THE DISCLOSURE

A storage box includes an upper box body and a lower box
5 body defining a respective top open chamber and hinged together in
such a manner that the upper box body can be turned horizontally
relative to the lower box body between a received position where
the upper box body and the lower box body are vertically arranged
in a stack, and an extended position where the upper box body and
10 the lower box body are set in an offset relationship and the upper
box body defines with the lower box body a bottom open chamber
below the top open chamber of the upper box body for storage
items.
